

Dear Sister,

I wish to share this book called 'Sisters In Science' with you. Why, if you ask, it's probably because I want to have a loving, long-lasting sisterhood with you. I hope you'll enjoy my sharing and opinion!

In the story, based on real life, Marie and her older sister Bronia lived with their family in Warsaw, Poland. Their parents, teachers, filled their home with music, stories, and science. But all was not well. Soon, their mother sadly passed away due to illness. Saddened, both sisters became determined to help others, so one of the sisters, Bronia, decided to become a doctor. Marie wanted to become a researcher. But unfortunately, girls in Warsaw weren't allowed to attend college or university. So, they both taught themselves unwillingly for a while.

Almost a few years later, the Russian government finally approved women to go to college and university. Surprising, right? So, Marie and Bronia decided to go to a university in pairs called Sorbonne. But how could they possibly pay? So, they concocted a plan: Bronia would start at the Sorbonne immediately, and Marie would work as a tutor to pay for Bronia's university bill. It was all going great! Until it was Marie's turn to go to Sorbonne; she changed her mind and wanted to stay with her friends in Poland. But Bronia, a promise-keeper, reminded Marie about their plan, so Marie stayed. After graduation, they both started to work. As we thought, they were amazingly successful. Marie became the first female teacher at Sorbonne and a scientist, and Bronia became a physician! Although they still didn't get their dream jobs, they were always grateful for everything!

As Marie Curie said, 'There is nothing more wonderful than being a scientist, nowhere I would rather be than in my lab, staining up my clothes and getting paid to play.' This story reminded me of you always appreciating everything. I'm also grateful for all the things you did for me from the day we met!

This story inspired me to be grateful and cherish relationships in our lives, just like you do all the time!

Love,  
Grace
